UP² Edge Compute Quick users guide

The UP Squared edge compute is your IoT and AI development platform, running Ubuntu. You'll connect your monitor, keyboard, mouse, and Ethernet, and use this platform to write your code.

Your UP Squared Edge Compute system

What's in your kit

UP Squared system (Ubuntu 16.04 OS & OpenVINO™ Toolkit)

USB Camera
(Only for AI Vision Kit)

USB Drive

Power Supply

You'll need the following, not included:

- A monitor with either HDMI or DisplayPort
- USB keyboard and mouse
- Ethernet cable (or optional WiFi, purchased separately)

For more information about your UP board, software, accessories and peripherals, please visit www.up-community.org

1 Connect

2 Power on

1. Make sure to connect monitor before powering up – if the board is powered up before connecting a monitor, you may need to power cycle the board to see the display
2. Connect power supply to the board and plug in power supply to an outlet

Caution: this is a high-performance board and may get hot during operation.

4 Log in

Log in to your Ubuntu 16.04 OS with the following credentials:

Username: `upsquared`

Password: `upsquared`

If you have proxy settings set them now: (System Settings > Network > Network Proxy).

4 Get started

To start IoT development, you can download any other IoT development platforms on line.

To start AI development: Open the “Getting Started” icon on the Desktop. It will open a browser to software.intel.com/up-squared-ai-vision-dev-kit/get-started. Follow the instructions there. * to run Intel® Movidius™ Myriad™ X, you need to have at least OpenVINO 2018 R5, The latest version can always help the performance.

Safety Precautions

Please read the following safety instructions carefully. It is advised that you keep this manual for future references

1. All cautions and warnings on the device should be noted.
2. Make sure the power source matches the power rating of the device.
3. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
4. Always completely disconnect the power before working on the system's hardware.
5. No connections should be made when the system is powered as a sudden rush of power may damage sensitive electronic components.
6. If the device is not to be used for a long time, disconnect it from the power supply to avoid damage by transient over-voltage.
7. Always disconnect this device from any power supply before cleaning.
8. While cleaning, use a damp cloth instead of liquid or spray detergents.
9. Make sure the device is installed near a power outlet and is easily accessible.
10. Keep this device away from humidity.
11. Place the device on a solid surface during installation to prevent falls.
12. Do not cover the openings on the device to ensure optimal heat dissipation.
13. Watch out for high temperatures when the system is running.
14. Do not touch the heat sink or heat spreader when the system is running
15. Never pour any liquid into the openings. This could cause fire or electric shock.
16. As most electronic components are sensitive to static electrical charge, be sure to ground yourself to prevent static charge when installing the internal components. Use a grounding wrist strap and contain all electronic components in any static-shielded containers.
17. If any of the following situations arises, please the contact our service personnel:
 - I. Damaged power cord or plug
 - II. Liquid intrusion to the device
 - III. Exposure to moisture
 - IV. Device is not working as expected or in a manner as described in this manual
 - V. The device is dropped or damaged
 - VI. Any obvious signs of damage displayed on the device
18. **DO NOT LEAVE THIS DEVICE IN AN UNCONTROLLED ENVIRONMENT WITH TEMPERATURES BEYOND THE DEVICE'S PERMITTED STORAGE TEMPERATURES (SEE Following Table) TO PREVENT DAMAGE.**
